TECHNICAL SKILLS

Programming Languages: Python, R

Data Modeling & Databases: Microsoft Excel, Power BI, PostgreSQL

Software & Tools: Git & GitHub, Microsoft Power Automate, VS Code, Jupyter Notebook, Microsoft Office

WORK EXPERIENCE

Census Helpline Operator, Statistics Canada *Apr 2026 – Present*

Contract Full-time | Ottawa, ON

- Managed a high-volume data collection pipeline across 1000+ inbound inquiries, guiding respondents through digital survey to ensure accurate, on-time census submissions while minimizing downstream QA review time
- Built an automated FAQ tracking system using Microsoft Lists and Power Automate, centralizing unique group-chat queries into a searchable knowledge base to streamline future census operations and reduce supervisor intervention
- Audited inbound records to resolve data discrepancies via internal database cross-checking, ensuring data integrity while maintaining strict compliance with federal privacy legislation

Bartender / Server, Izakaya Shingen *Sep 2022 – Present*

Permanent Part-time | Ottawa, ON

- Provided high-quality hospitality in a fast-paced environment and trained incoming front-of-house staff on daily operations
- Developed a PostgreSQL database to clean and store raw POS sales data, reducing turnaround times for ad-hoc ownership requests regarding specific revenue and item metrics
- Created a Power BI dashboard to replace manual POS reporting, tracking quarterly sales and item performance to reduce manual reporting time by 15% and deliver rapid trend visibility to ownership
- Evaluated promotional campaigns and presented data insights to the owner, directly informing menu and pricing adjustments that increased average order value by 10%

Business Development & Sales, Motley Institute of Business & Technology *Oct 2023 – Feb 2024*

Internship | Remote

- Evaluated sales and marketing engagement datasets across LinkedIn, internal databases, and webinar networking events to identify high-conversion enterprise segments, contributing to 2 new partnership inquiries
- Centralized different partner and outreach records into a structured Excel system to track service offerings, pricing structures, and historical collaborations, improving data accuracy by 20% and saving 2.5 hours of weekly tracking time

PROJECTS

Recession Risk Index | Python, Power BI (GitHub)

- Built a quarterly recession probability model using yield curve spreads, unemployment rates, CPI, PMI, and policy rates to identify early warning signals for economic downturns
- Designed Power BI dashboards to visualize economic trends and risk levels, making the results usable for strategic planning and scenario analysis

Market Basket Analysis & Association Rule Mining | R (GitHub)

- Applied the Apriori algorithm and frequency analysis in R to purchasing behavior data, uncovering top-selling items and hidden product relationships
- Translated those relationships into concrete bundle discount, placement, and pricing recommendations based on lift and confidence measures, delivered in a final report with supporting charts

EDUCATION

Bachelor of Mathematics, Statistics (Minor: Economics)

Carleton University | *Ottawa, ON*
